

Supplementary Table 1. Odds ratios for the association between poor recovery on PODs 4 and 7 and DFS at 3 months

	Unadjusted estimated		Adjusted estimated	
	Odds ratio (95% confidence interval)	P-value	Odds ratio (95% confidence interval)	P-value
Poor recovery on POD 4	0.348 (0.153, 0.793)	0.012	0.541 (0.214, 1.368)	0.195
Poor recovery on POD 7	0.419 (0.127, 1.378)	0.152	0.536 (0.140, 2.046)	0.361

In the adjusted model, age, preoperative frailty, preoperative disability-free survival, surgical duration, intraoperative blood loss volume, and postoperative chemotherapy were adjusted for.

POD, postoperative day; DFS, disability-free survival.
