

Supplementary Table 2. Sensitivity analysis: multivariable logistic regression

	Odds ratio (95% CI)	P value
Model 1*	0.87 (0.41, 1.84)	0.076
Model 2†	0.55 (0.17, 1.78)	0.325
Model 3‡	0.88 (0.25, 3.08)	0.836

*Adjusted with all covariables included in the propensity model.

†Adjusted with all covariables in Model 1 plus month of the TAVR procedure as continuous variable.

‡Adjusted with all covariables in Model 1 plus categorized TAVR months in 6-month intervals.

Abbreviations: CI: confidence interval
